Vitilab

The Vitilab project is resource centre, research demonstration and experimentation hub for digital solutions and services in the wine-making sector in Burgundy. It will be an innovation space, with experimental vinyards and facilities designed for prototyping and transforming ideas into practice and products

Actions and Objectives

Digital transformation will be achieved through investments in key professional sectors. If new uses are to be invented, there must be places where answers can be provided.
Vitilab will be a real-life 'solution' brain storming, creation & testing site, designed to train and educate site students and wine professionals to acquire a digital competences and skills.

Expected Results

To create a hub with three key functions:
A resource center, with an "extended showroom" including vineyards, cellars, sales space, and training facilties.
- A business space where companies can test ideas and solutions in situ
- A living lab where students and professionals can become familiar with the use of new digital tools, experiment and prototype

Role of ERUDITE

The good pracrice of the FAB-lab network in Slovenia which links rural hubs to academic and research institutions and to each other, to share skills and equipment
The regional stakeholder group which facilitated sharing and learning with Rural Digital Hub at the 'Ferme du Marault'.
